

MEDUS Reference D/A Converter

The **MEDUS D/A Converter** is the successor of our renowned MEDEA+ D/A Converter.
(In Greek Mythology Medus is a son of Medea).

The MEDUS features are:

- Digital inputs on XLR, RCA and Toslink connectors. **USB input.** FireWire and S/PDIF on glass fiber are optional.
- Analog outputs on XLR and RCA.
- Sampling frequencies up to 192kHz.
- Handles **DSD playback** via the USB input.
- **IR Remote** for volume control, input source select, DAC filter, absolute polarity, output muting, display brightness, basic output level (analog).
- Display for input source, sampling frequency, wordlength, DAC filter type, mute state, absolute polarity.
- Uses 8 discrete Weiss OP1-BP operational amplifiers.
- Extremely efficient de-jittering circuitry.
- Basic output level selectable in a wide range in the analog domain.
- State Of The Art converter design.
- Mu-Metal mains transformer shielding.
